EDUCATION

Karel de Grote-Hogeschool **Antwerp, Belgium**
Bachelor of Applied Computer Science Sep 2023 – Jun 2026

- Relevant coursework: Programming & Architecture, Backend Development, Data & AI, Infrastructure, Cloud Technologies, Integration

EXPERIENCE

Junior Software Engineer | One16 BV **Antwerp, Belgium**
Internship – Planning CRM Tool for Volleyball Puurs | Java, Spring Boot, PostgreSQL, Azure Mar 2026 – Jun 2026

- Co-developed a match-scheduling CRM for an external sports club, automating planning previously coordinated through spreadsheets and group chats.
- Implemented Spring Boot services and PostgreSQL data models covering fixtures, court availability, and team constraints.
- Built validation and conflict-detection logic flagging scheduling clashes across multiple teams and courts before calendar publication.
- Contributed to the Microsoft Azure deployment pipeline, shipping a publicly accessible version after the first sprint.

Freelance Software Engineer | Schoenen Torfs **Antwerp, Belgium (Remote)**
Supplier Risk Intelligence Platform | Python, FastAPI, React, TypeScript, PostgreSQL, Docker, Claude API Feb 2026 – May 2026

- Built a Supplier Risk Intelligence platform in a Scrum team of three freelance engineers, working directly with the CEO and the purchasing team.
- Designed the supplier scoring logic, subscores and evaluation criteria with the purchasing team, so the dashboard matched how they choose suppliers.
- Built web scrapers collecting sustainability certifications, audit reports and compliance scores, structured alongside internal business data; used the Anthropic Claude API to extract and classify risk indicators from supplier documents.
- Delivered the MVP (FastAPI APIs, React and TypeScript dashboard, PostgreSQL, Docker) and continued into post-MVP development toward a production-ready release.

Founder & Storefront Owner | Eldorado & G2G Marketplaces **Remote**
Independent E-Commerce Business – Digital Goods | Platform APIs, Automation Jun 2025 – Present

- Founded and operate digital-goods storefronts on two international marketplaces as a fully self-managed business.
- Completed 200,000+ combined sales across both marketplaces, generating $500K+ in total revenue within the first year.
- Manage the full operation end-to-end: pricing strategy, inventory, supplier coordination, and customer support at scale.
- Automated stock and order management through marketplace APIs with custom internal tools (see Projects).

PROJECTS

Gaming Statistics Network – RoyaleTracker.gg, Brawlmetrics.gg, Royaledly.com, Brawldly.com Jan 2026 – Present
Founder & Developer | Next.js, React, TypeScript, Node.js, Express, PostgreSQL, Docker

- Built and run four game sites for Clash Royale and Brawl Stars that drew 203K+ Google clicks and 5.4M+ search impressions in three months, ranking in Google's top 4 for terms such as "clash royale stats" and "best 2v2 decks".
- Designed a battle-data pipeline that polls Supercell's official APIs and stores 887K+ battles per day in PostgreSQL, powering win-rate rankings for 184 cards and 18 arenas. A second pipeline processes 1.45M+ Brawl Stars battles per day.
- Built 651 programmatic SEO pages with generated intros, dynamic Open Graph images and structured data, plus an AI deck rater on the Anthropic Claude API.
- Self-hosted all four sites on a Hetzner VPS with Docker and Coolify, behind Cloudflare, and monetized them with Google AdSense.

Supplier Stock & Revenue Manager May 2026 – Present
Internal Tool Used by Marketplace Suppliers | React, Vite, Node.js, Express, Supabase, Vercel, Render

- Built a stock, supply, and profit-tracking platform adopted by suppliers operating on the Eldorado and G2G marketplaces.
- Integrated marketplace APIs to automatically sync listings, orders, and stock levels, eliminating manual spreadsheet entry.
- Implemented revenue and profit dashboards giving suppliers a real-time financial overview of their operations.

EVALeBike – E-Bike Test Management Platform Feb 2025 – May 2025
University Research Department Project | Java, Spring Boot, Spring Security, PostgreSQL, Docker, Azure

- Led backend development using Java Spring Security, Docker, and Azure Cloud.
- Developed RESTful APIs with Spring Boot enabling seamless data exchange between systems.
- Deployed a scalable system with CI/CD pipelines, boosting development efficiency.

AWARDS

- **Beehive Company Challenge – Jury Award Winner**, Hack the Future 2025 Hackathon (Belgium)

ADDITIONAL

Languages: English (Proficient), Bulgarian (Native)
Technical Skills: Java, Spring Boot, Spring Security, JavaScript, TypeScript, Python, SQL, Node.js, Express, REST, React.js, Next.js, MUI, Tailwind CSS, PostgreSQL, Supabase, Docker, Coolify, Cloudflare, Microsoft Azure, Vercel, Render, FastAPI, Anthropic Claude API, Web Scraping, Git, Bash, HTML, CSS, C, JavaFX
Concepts: OOP, MVC, Design Patterns, REST API Design, Data Pipelines / ETL, Agile / Scrum, CI/CD, Technical SEO & Web Analytics
